## Disclaimer and Warning

Congratulations on purchasing your new Viewpro product. Please read this entire document carefully. Failure to read or follow instructions and warnings in this document may result in damage to your Viewpro product. Disassemble the gimbal camera by user is not permitted, as which may cause the camera does not work normally. Viewpro accepts no liability for damage, injury or any legal responsibility incurred directly or indirectly from the use of this project. The user shall observe safe and lawful practices including, but no limited to, those set forth in the manual.

### Legends

Warning

Important Note

## 1. Product Introduction

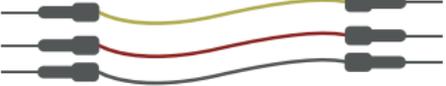

### 1.1 Introduction

Z30TM is a powerful 3-axis gimbal integrated with a 30x optical zoom SONY camera and a 1.5km laser rangefinder. It supports visible optical zoom, photographing and video, target tracking and laser distance measuring. OSD can display angle, zoom times, status of record and picture mode, tracking frame, also can select to turn off the OSD. When the external GPS and time input, GPS coordinate and shooting time can be saved in image file, OSD can display real-time, target GPS coordinate and distance as well. It features fast focus and sensitive distance measurement. The high-precision laser rangefinder can accurately resolve the GPS location and distance of the object within 1500 meters. The 3 axis gimbal can achieve stabilization in yaw, roll and pitch. The integrated design of damping system and gimbal can greatly reduce mechanical vibration.

Z30TM is widely used in UAV industries of public security, electric power, fire fighting, zoom aerial photography and other industrial applications.

## 1.2 In the Box

<b>A. Standard Version</b>			
Gimbal Camera x 1 pc		USB to TTL Cable x 1 pc	
Copper Cylinder x 4 pcs		M3 Screw x 8 pcs	
Power Cable x 1 pc			
<b>B. Viewport Version</b>			
Gimbal Camera x 1 pc		USB to TTL Cable x 1 pc	
Copper Cylinder x 4 pcs		M3 Screw x 8 pcs	
Power Cable x 1 pc			
PWM Control Cable x 1 pc			

TTL / S.BUS Control Cable x 1 pc	
TTL Connect Cable x 3 pcs	
Ethernet Cable x 1 pc	

## 2. Installation Instruction

### 2.1 Overview

- |                         |                             |
|-------------------------|-----------------------------|
| [1] Control box         | [8] TF card slot            |
| [2] Upper damping board | [9] Roll axis motor         |
| [3] Lower damping board | [10] Pitch axis motor       |
| [4] laser rangefinder   | [11] 3-6S power interface   |
| [5] FHD zoom camera     | [12] Micro HDMI interface   |
| [6] Damping ball        | [13] Ethernet interface     |
| [7] Yaw axis motor      | [14] Viewport unlock button |

- Please ensure that there isn't any obstacle while the motor rotating.
- Please remove the obstacle immediately if gimbal camera is blocked during rotation.

## 2.2.1 Control Box Printing (Standard Version)

- The input voltage cannot be higher than 6S.
- The pin insertion interface cannot be connected with power supply.
- The yellow jumper cap cannot be removed

## 2.2.2 Control Box Printing (Viewport Version)

Front Side

Left Side

Right Side

## 2.3 Device Dimensions (Standard Version)

Unit: mm

## 2.3 Device Dimensions (Viewport Version)

Unit: mm

Control Box

## 2.4 Install Mounting Part

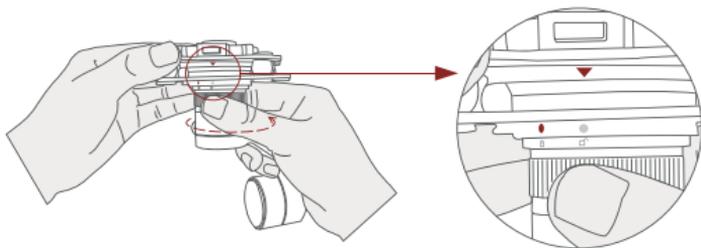

- (1) Find out the arrow on the gimbal which indicating the yaw heading of the payload (i.e. the lens direction when the camera power on), and synchronize with the direction specified by the UAV.
- (2) Fix one end of the copper cylinder on the screw hole of lower damping board, and use M3 screw to fasten it.
- (3) According to the provided screw hole dimension you can make suitable mounting holes on the UAV mounting board, and fixes the other end of the copper cylinder on the mounting board of the UAV (Viewport version is the same).

## 2.5 Viewport Release Instruction

1. Make sure the two white stripes indicated in above picture are aligned with each other. (If the stripes are not aligned to each other, please pinch the connector part and turn it to left manually)

2. Align the white dot (unlock icon) to the red triangle (below unlock button), push the gimbal into the Viewport completely and then rotate the gimbal camera anticlockwise.

3. When you hear "click" sound (when red dot is aligned to the red triangle) means the gimbal camera and Viewport has been locked.

4. To unlock the Viewport, you need to press on unlock button and rotate the gimbal camera clockwise till the white dot align to the red triangle. Then pull the gimbal out from the Viewport.

## 2.6 Install TF Card

TF (Micro SD card): Install the TF card to the card slot (Re. 2.1 Overview). Support max 128GB. Request Class 10 (10m/s) transmission speed or higher and FAT32 or exFAT format.

- Make sure device is power off when inserting the TF card, hot plugging is not supported.
- 

## 2.7 Image Output Interface

HDMI: micro HDMI output, HD 1080P 60/50/30/25fps, 1080P 60fps as default. (Optional)

Network: Ethernet output interface, support RTSP/RTMP/UDP/ONVIF video streaming. Default: RTSP output, IP address: RTSP: //192.168.2.119:554, output resolution: 720P (record in 1080p), frame rate: 25fps, bit rate: 2M.

AV: no AV output

- 
- Above output mode is optional. Please subject to your actual product.

- When using user interface software Viewlink for network connection, the network of external device (computer) should be the IP address: 192.168.2.2 (choose the last byte among 2~254, can not be 119 same as the gimbal), subnet mask: 255.255.255.0, Default gateway: 192.168.2.1, and all firewalls of the computer must be closed. Then enter the IP address of the gimbal camera, Open Video, the video stream can be outputted.
- 

## 3. Signal Control

### 3.1 PWM Control

Control the gimbal camera functions by the multiplex pulse width modulation signal outputted by PWM channel of the remote control receiver. The camera needs up to 6 control channels of PWM (to expand tracking function use up to 7 PWM channels). You can choose needed functions according to actual usage to reduce the required number of PWM channels.

#### 3.1.1 PWM Connection Diagram (Connect pitch channel as example)

Remote Controller

Receiver

### Connection Diagram (Standard Version)

Remote Controller

Receiver

### Connection Diagram (Viewport Version)

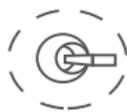

### 3.1.2 PWM Control Operation Instruction

**1) Pitch** (PWM Pitch channel in to control Pitch. Joystick, rotary knob or 3-gear switch on remote control are optional. 3-gear switch as example.)

Position 1

Low Gear  
Pitch Up

Position 2

Middle Gear  
Pitch Stop

Position 3

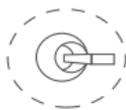

High Gear  
Pitch Down

**2) Yaw** (PWM Yaw channel in to control Yaw. Joystick, rotary knob or 3-gear switch on remote control are optional. 3-gear switch as example.)

Position 1

Low Gear  
Yaw Left

Position 2

Middle Gear  
Yaw Stop

Position 3

High Gear  
Yaw Right

**3) Mode** (PWM Mode channel in to adjust speed control/one key to Home position etc functions. Rotary knob or 3-gear switch on remote control are optional. 3-gear switch as example.)

Position 1

Low Gear

Position 2

Middle Gear

Position 3

High Gear

Position 1: Low speed mode, control pitch / yaw with this mode at lowest speed

Position 2: Middle speed mode, control pitch / yaw with this mode at middle speed

Position 3: High speed mode, control pitch / yaw with this mode at highest speed

(If it is controlled by rotary knob, the speed will change according to switch position)

### Function of continuous switching:

**3.1)** Operate 1 time continuously and quickly, from position 2 - 3 - 2, to Home position.

**3.2)** Operate 2 times continuously and quickly, from position 2 - 3 - 2 - 3 - 2, the camera lens looks vertically down.

**3.3)** Operate 3 times continuously and quickly, from position 2 - 3 - 2 - 3 - 2 - 3 - 2, to disable Follow Yaw Mode (gimbal yaw not follows by frame)

**3.4)** Operate 4 times continuously and quickly, from position 2 - 3 - 2 - 3 - 2 - 3 - 2 - 3 - 2, to enable Follow Yaw Mode (gimbal yaw follows by frame)

**4) Zoom** (PWM Zoom channel in to control Zoom. Joystick, rotary knob or 3-gear switch on remote control are optional. 3-gear switch as example.)

Position 1

Low Gear  
Zoom Out

Position 2

Middle Gear  
Stop Zoom

Position 3

High Gear  
Zoom In

**5) Focus** (not functional for this channel)

**6) Pic/Rec** (PWM Pic/Rec channel in to control take picture and record. Joystick, rotary knob or 3-gear switch on remote control are optional. 3-gear switch as example.)

Position 1

Low Gear

Position 2

Middle Gear

Position 3

High Gear

Switch from Position 2 to 1: Take a picture

- OSD display 'REC IMG' a second.

Switch from Position 2 to 3: Start record / repeat operation to stop record

- Start record, the OSD display rec "hh:mm:ss".
- Stop record, the OSD display "STBY xxx mins left".

## 7) Multi: tracking control

Position 1

Low Gear

Position 2

Middle Gear

Position 3

High Gear

Switch from Position 2 to 1: Cancel tracking

Switch from Position 2 to 3: Exit the tracking, display the lock frame in the center of the screen, start tracking

Switch from Position 3 to 2: "+" appears in the center of the screen, adjust the cross cursor UDLR with yaw and pitch control to lock target object

Switch from Position 2 to 3 again: Choose another target for second tracking

## 3.2 Serial Port / TTL Control

TTL communication requirements: TTL signal is 3.3V, baud rate: 115200, data bit 8, stop bit 1, no parity, HEX send and receive.

**Connection Diagram** (PC - USB to TTL Cable- Gimbal Camera as example):

Gimbal Camera	Cable
TX	↔ RX (White)
RX	↔ TX (Green)
GND	↔ GND (Black)

Connection Diagram Standard Version

Connection Diagram Viewport Version

## Diagram of USB to TTL Cable:

Connect the camera to the upper computer by USB to TTL cable (Adopt connection method of TX to RX, RX to TX, GNG to GND at Dupont ends of the provided USB to TTL cable, connect to the specified TTL of the gimbal, and the USB end of the cable connect to computer).

Install Viewlink control software to test the functions directly. Users may choose to develop their own software, please contact technical support for TTL control protocol file.

ViewLink is a user interface developed by Viewpro for Viewpro gimbal cameras, you can download it from Viewpro website ([www.viewpro-tech.com](http://www.viewpro-tech.com)) or ask distributors for installation package.

• Connect serial port of gimbal to pins, DO NOT connect with power supply.

• The default baud rate of serial port is 115200, which can be changed according to the docking equipment.

### 3.3 S.BUS Control

Control the gimbal camera functions by one combining signals. Connect the external S.Bus to S.Bus port on the control box, and the external S.bus signal GND connect to the GND interface of the control box.

Wiring Diagram (Take Futaba remote control for example):

Wiring Diagram Standard Version

## Wiring Diagram Viewport Version

S.Bus control mode: default S.Bus signal channel 9-15 to control gimbal camera functions (the function of channel is consistent with corresponding channel in PWM function description)

Channel 9: Yaw Control

Channel 10: Pitch Control

Channel 11: Mode Control

Channel 12: Zoom Control

Channel 13: Focus Control

Channel 14: Pic/Rec Control

Channel 15: Multi Backup

---

- User can set the channels by setting serial command according to the actual requirement. The S.Bus channel position can be arranged in any sequence within channel 1-15 to connect with the flight controller or remote control.

- TTL control and S.bus control cannot coexist at the same time for standard version. The default control is TTL if no requirement. The user can set to S.bus control if needed (please contact with our technical support for the setting instruction.)

---

### 3.4 TCP control

For Viewpro gimbal cameras with Ethernet output, the default IP address is: 192.168.2.119, control port: 2000. You can send the corresponding protocol to realize TCP control after connecting.

The TCP control protocol is [Frame header: EB + command ID: 90 + data body (serial port protocol) + Checksum (CS = body checksum, checksum is calculated as a sum of all bytes of data body modulo 256)]. Or directly use UI Viewlink to control after TCP connection.

## 4. Specification

Hardware Parameter	
Working voltage	12V
Input voltage	4S ~ 6S

Output voltage	5V (connect with PWM)
Dynamic current	450mA @ 12V
Idle current	330mA @ 12V
Power consumption	≤ 5.4W
Working environment temp	-20℃ ~ +80℃
Output	micro HDMI(HD output 1080P 60fps) / Network interface / SDI
Local-storage	SD card (Up to 128G, class 10, FAT32 or ex FAT format)
Control method	PWM / TTL / S.BUS
<b>Gimbal Spec</b>	
Pitch/Tilt	±90°
Roll	±85°
Yaw/Pan	±150°
Vibration angle	Picth/Roll: ±0.02°, Yaw: ±0.03°
One-key to center	√
<b>Camera spec</b>	
Imager Sensor	SONY 1/2.8" "Exmor R" CMOS
Picture quality	Full HD 1080 (1920*1080)

Effective pixel	2.13MP
Lens optical zoom	30x, F=4.3~129mm
Digital zoom	12x (360x with optical zoom)
Min object distance	10mm(wide end) to 1200mm(tele end). Default 300mm
Horizontal viewing angle	1080p mode: 63.7°(wide end) ~ 2.3°(tele end) 720p mode: 63.7°(wide end) ~ 2.3°(tele end) SD: 47.8°(wide end) ~ 1.7°(tele end)
Sync system	Internal
S/N ratio	more than 50dB
Min illumination	Color 0.01lux@F1.6
Exposure control	Auto, Manual, Priority mode(shutter priority & iris priority), Bright, EV compensation, Slow AE
Gain	Auto/Manual 0dB to 50.0dB(0 to 28 steps + 2 setep/ total 15 steps) Max.Gain Limit 10.7 dB to 50.0dB (6 to 28 steps + 2 step / total 12 steps)
White balance	Auto, ATW, Indoor, Outdoor, Outdoor Auto, Sodium Vapor Lamp (Fix/Auto/Outdoor Auto), One-push, Manual
Shutter speed	1/1s to 1/10,000s, 22 steps
Backlight compensation	Yes
Aperture control	16 steps

Defog	Yes
OSD	Yes
<b>Camera Object Tracking</b>	
Update rate of deviation pixel	50Hz
Output delay of deviation pixel	<10ms
Minimum object contrast	5%
SNR	4
Minimum object size	16*16 pixel
Maximum object size	160*160 pixel
Tracking speed	32 pixel/frame
Object memory time	100 frames (4s)
The mean square root values of pulse noise in the object position	< 0.5 pixel
<b>Laser Rangefinder</b>	
Range	5-1500meters
Location display	Latitude and longitude
<b>Packing Information</b>	
N.W.	835g

Product meas.	135.5*135*120mm
Accessories	1pc gimbal camra device, 16pcs screws, 4pcs copper cylinders, 12pcs damping balls, 4pcs damping boards / Hight quality plastic box with foam couchion

## 5. FAQ

1. What's the HDMI output for Z30TM?

A: HDMI 1080P 60fps(as default)/HDMI1080P 50/30/25fps.

2. Does Z30TM support taking photos during recording?

A: Yes

3. How to set the storage format of Z30TM ?

A: When the IP output resolution is set to 1280\*720, the storage resolution is 1920 \* 1080; Storage resolution is 1280 \* 720 when the IP output resolution is set to 1920\*1080; The video frame rate saved in the TF card is the same with the one set during IP output. The frame rate is 25fps or 30fps for optional.

4. What is the refresh frequency of distance measurement for Z30TM?

A: Refresh rate is 1 second at a time.
